

NIGHTCUTTER™

Tools of Light

M60L Combat

With 60 lumens of light output and over an hour of full-throttle run time, the M60's sunlight-white beam can be delivered with various beam shapes depending on user preference. Boasting a carefully specified white diode whose color is the closest to true sunlight, interchangeable front bezels and optics, the M60 is ideal for public safety and security professionals. Offering unique thermal management of the 5 Watt Luxeon™ emitter, customizable attributes and proven mechanisms, the M60L sets the new standard in high performance lighting.

P20 Strategist

20 lumens of output from the 1 Watt Luxeon™ emitter, sleek profile and the longest run-time (4 hours) in its class, the P20's high intensity light can be delivered with various beam shapes depending on user preference. Interchangeable optics, a guaranteed sunlight white beam, integrated heavy duty polished stainless steel pocket clip make the P20 tough to beat. Lightweight, compact and a cool running combined with simplicity and reliability sets the Strategist apart from the crowd.

5CSI Forensic

Designed for professional use only, the 5CSI specialty light emits high intensity ultra-violet (UV) light at a wavelength of 375 nanometers (nm) and can damage eyes if viewed without protection. This wavelength of light helps to illuminate stains from bodily fluids, anti-counterfeit markings and various other materials not visible to the unaided eye.

5PC Tactical Elite

The 5PC minimizes bulk and maximizes versatility. The utilitarian benefits of the 3/8" wide, polished, heat treated and laser engraved stainless steel pocket clip are obvious. 5 individual LEDs provide fully redundant light output and are nearly indestructible. The heavy duty billet aluminum body design seals out debris and operates flawlessly in adverse environments. The momentary silent tail switch mechanism keeps you safe, minimizes complexity and allows the light to be a free-standing lantern.

3CC Chart

The 3CC Chart light has been optimized for night reading of text and charts. Small enough to fit in a shirt pocket, yet carries enough battery capacity to remain on for over 200 hours. Whether you're searching for Elm Street on that crumpled old map at 1am, studying the navigational chart around your favorite fishing spot, or running through your preflight checklist, the 3CC Chart light maximizes your night vision.

5C/3C Sport

The 5C and 3C are known as two of the smallest and most compact portable lithium powered LED lights on the market. The patent pending switch design eliminates needless parts that may wear out, break or leak. With the entire illumination assembly in the light head, changing light colors is quick and simple. Small enough to fit in a shirt pocket, yet powerful enough to light up a dark alley. Whether you're mountain biking in the Rockies, camping in the Tetons, searching for buoy #17 in Nantucket Sound or just looking for that one old picture frame in the attic, the 5C and 3C Sport lights will make your night a little safer.
