

HVP - High Velocity Protection

Modular Goggles Series: Wiley X has devoted a specific department to the development and creation of new and innovative designs based on feedback from soldiers and officers in the field. These modular systems combine several eye protecting functions in one. Wiley X prides itself on designing modular eye protection that can be worn for multiple applications. Single lens units and interchangeable one, two and three lens systems have been designed to function in any application where clear, protected sight is needed - on ops, extreme sports, shooting or hanging out.

SG-1

Each SG-1 comes complete with anti-fog, scratch resistant Smoke Green and Clear as Crystal lenses, rubber tipped snap-on temples, Tactical Strap & Micro Fibre case.

Impact resistant lenses:

Smoke Green lenses are perfect for general daytime conditions, providing glare reduction without distorting colours.

Clear as Crystal lenses for night, dawn or dusk operations, indoor scenarios & medical or dental applications.

Please ask about Prescription lenses.

SG-1

This patent pending system provides two functions in one: converting from a fashionable sunglass to low profile goggle. Its' ballistic, anti-fog lenses can be changed in seconds when weather or activity dictates the need. Unique Ultra-Foam™ seals the eye orbits providing protection from extreme changes in body temperature or weather temperature. The temples disengage with a push of a button and can be replaced with a snap loaded elastic headband. The SG-1 combines wind protective fashion with ballistic function.

When the Army Rangers approached us two years ago they wanted us to design a ballistic goggle they could wear for all around use. They wanted something they could jump with, use during close quarters combat as well as have basic sun protection in their down time. Two years in development the SG-1 system has met all the challenges posed.

This patented low profile goggle functions perfect as a jump goggle. It stays firmly in place and its' aerodynamic lines cut through the wind. Once on the ground the goggle performs better than any sand, dust or wind goggle ever imagined.

Our "Ultra Foam" is a rubber based rim that is much more durable than traditional goggle foam. It also provides a much better seal around the ocular ridge keeping foreign objects and particles from the users field of vision. Our "Ultra Foam" is also the only foam that can be customized based on environment and operations being conducted. Notches are intentionally manufactured into the foam so sections can be removed. This allows more ventilation if conducting intense operations in humid conditions. If the conditions are very dry, where sand, dust, and wind is a prominent concern, then the foam remains as is. Please Note: Ultra Foam cannot be replaced once removed. This goggle was widely heralded for its performance in sandstorms experienced by our troops conducting both OEF and OIF.

The SG-1's streamlined design fits better under all issued helmets and is more functional given the interchangeable, two lens package. Our wrap back technology drastically improves peripheral vision, plus the lenses can be interchanged providing day and night protection. Each ballistic lens is layered with our proprietary anti-fog, and scratch resistant coatings providing perfect optical clarity and protection. The SG-1 is currently the only goggle that truly functions with NVG's.

Lastly the product can be converted from a goggle into a functional, ballistic sunglass providing all around use. This is the only true ballistic, modular goggle ever produced. Each SG-1 system comes with two sets of ballistic, anti-fog lenses (clear and tinted), elastic strap, temples and case for storage.

CQC GOGGLE

CQC Low Profile Goggle

Working closely with Special Forces we focused on a modular goggle for the new millennium soldier. Our new CQC goggle provides all around function, for all operations conducted. It's streamlined design cuts through the wind and fits the face closely and tightly. Whether you need protection for urban warfare, land warfare, sun, dust, wind or snow, this goggle has it all.

Each CQC comes complete with anti-fog, scratch resistant Smoke Green and Clear as Crystal lenses, rubber tipped snap-on temples, Tactical Strap & Micro Fibre case.

Impact resistant lenses:

Neutral Slate lenses are perfect for general daytime conditions, providing glare reduction without distorting colours.

Clear as Crystal lenses for night, dawn or dusk operations, indoor scenarios & medical or dental applications.

Please ask about Prescription lenses.

The new CQC goggle is an excellent jump goggle. It's streamlined design cuts through the wind and fits the face closely and tightly.

Whether you need protection for urban warfare, land warfare, sun, dust, wind or snow, this goggle has it all. The few ballistic goggle designs that are even on the market right now are large, uncomfortable, one dimensional and cumbersome. Their straps have to be worn over the top of a soldier's helmet and never give a good seal on an individual's face. When questioned all services stated they wanted a more streamlined goggle that was more comfortable and didn't sit so far away from the face. Traditional goggles often give the wearer tunnel vision. Our CQC goggle can be worn with its strap, under the helmet, which greatly improves fit and comfort. This also improves vision as the goggle is designed to sit very close to the face. Our new CQC goggle (along with our SG-1 design) can even be worn with night vision.

Traditional protective goggles use foam that breaks down over a short amount of time. Some don't use foam at all and have opted for a rubber ridge to pad the user's face. This rubber type of ridge gets slippery when the wearer sweats and becomes very uncomfortable over a period of time. The Wiley X CQC goggle uses our exclusive "Ultra Foam" seal which is far more durable than traditional foam and much more comfortable than the rubber ridge used by competitors.

The CQC goggle comes equipped with 2 sets (neutral slate / clear) of ballistic polycarbonate. Each lens is 2.5mm thick and clear coated with our proprietary anti-fog solution giving the user perfect, unobstructed vision. Add our silicone, scratch resistant coating and you have the best optical quality, ballistic lenses available.

The new CQC goggle is also modular. It converts from a ballistic goggle into a set of fully functional eyewear with just a push of a button. Now when a soldier is in his or her down time they can attach the temples and wear the product as a sunglasses providing 100% Ultra Violet protection.

For added protection, the CQC goggle has protective side shields that can be attached in either sunglass or goggle form. This gives the user extra peripheral and temporal protection not offered in any other goggle design.

Our CQC goggle comes with two sets of ballistic, anti-fog lenses (neutral slate, clear), temples, elastic strap, and soft case for storage.
